

Complex Metro Projects

From Extension Delivery to Line Automations

A North America Webinar Wrap-up

In February 2026, UITP North America organised a webinar bringing together transit professionals to tackle these challenges head-on: Complex Metro Projects: From Extension Delivery to Line Automations.

The content of the webinar highlighted a recent UITP publication offering tools, lessons learned, and best practices for delivering metro line extensions on-time and on-budget.

The webinar also featured a presentation by Metro Madrid on the Line 6 conversion to GoA4 (full automation, driverless), providing real-world insights into the intersection of technical innovation, operational readiness, and brownfield project execution.

- Insights on planning and governance
- Lessons from brownfield automation
- How to reskill and organise the human factor
- Why system integration must be a day-one priority
